

Solo, version 101.531 Changelog

+-----+
| SOLOW10_d101_p531 |
+-----+

Released July 9th, 2019

Summary

This release contains updates to the scripts used to apply the OS during reimage. It contains no changes to the actual operating system applied to the solo.

Major Improvements

ISO size

The ISO file as a whole has been repackaged to occupy less space and bandwidth. This has been achieved by stripping unnecessary files from the OS installer and is functionally identical to the previous version of the solo's OS.

Major Fixes

Logging

Scripts now produce better, more concise logs. Additional verbosity around Codemeter and Windows licencing.

Robustness

More consideration for edge-cases surrounding missing system files.

Minor Changes

-Hammerfall DSP output level gain changed from Hi to +4dB (pro audio machines only).
